

commodore PC40-III

PC 40-III

The Commodore MS-DOS® series of personal computers offers a complete package of outstanding computing power and versatile graphics right out of the box. And at a price you can afford. The Commodore PC's come fully equipped with all of the memory and video display capabilities needed to run the MS-DOS® Operating System and virtually any IBM® PC compatible software.

The PC 40-III, using an 80286 microprocessor, provides both versatility and higher performance with three different clock speeds (6MHz, 8MHz, and 12MHz). The PC 40-III is configured with 1MB of memory on the motherboard (expandable with memory cards to 16MB), one 5¼" 1.2MB floppy drive, one 40MB hard disk and VGA graphics as standard. It features an Autoconfig BIOS to simplify expansion, and contains four expansion slots (three 16 bit expansion slots and one 8 bit expansion slot).

COMMODORE PC 40-III
